

shown in Fig. 8(c). With respect to the diaper main body 2 folded in this manner, a display part 20a (in the present embodiment, size "S" is shown) may be formed on the outside part which has been turned up along a turn-up line D, as shown in Fig. 10(a). In such a folded state, in place of the display part 20a, or in addition thereto, a display part may be formed on the outside part which has been turned up along a turn-up line C.

ABSTRACT AMENDMENTS

ABSTRACT

A folded disposable diaper, includes a diaper main body having a front abdomen portion, a back portion, and a crotch portion interconnecting the front abdomen portion and the back portion. The diaper main body has indicia indicating a size of the diaper main body and/or indicating a front or back side of the diaper main body. The diaper main body is folded over at a fold so as to define a first diaper body portion on one side of the fold and a second diaper body portion on another side of the fold, the indicia being disposed on an edge face of the fold, and the indicia being viewable when two or more like folded diaper main bodies are stacked on one another. The indicia is also disposed on and extended to both the first diaper body portion and the second diaper body portion.
